

DevConnect hooks you up. It links your business systems to the E-Complish technologies credit card and ACH payment processing systems. Payment information is submitted online by customers for authorization in real time.

What is DevConnect?

DevConnect technology is the integration system of choice for companies with the ability to initiate server side and client side SSL connections. This preferred technology gives merchants a high degree of control while securely processing all ACH and credit card transactions. DevConnect is unique in that it is a single web service that transmits both ACH and credit card transactions through a single API. No more writing two sets of code!

Customer payment data travels to the gateway via a server-to-server link launched by the merchant server. The merchant server gets its authorization straight from the E-Complish gateway, providing companies with heightened control over responses to customers.

HOW IT WORKS

Payment gateways allow for real-time electronic authorization of credit card payments and ACH check transactions. With payment gateway technologies, consumers can easily purchase goods and services on the Internet using credit cards and personal checks. DevConnect is the bridge that facilitates this process by linking merchant systems to credit card and ACH processing systems using a single API. Check and credit card information is submitted to the merchant, after which it is routed by the E-Complish gateway system for immediate authorization.

The DevConnect application programming interface (API) is compatible with most programming languages and platforms:

- Platforms: Windows, IBM AIX, UNIX and AS400
- Languages: Java, Miva, Cold Fusion, VB.NET, ASP.NET, Delphi, ASP, C#, Perl, J#, C/C++, PHP and Visual Basic.

A Complete Payments Solution with Power Reporting

- Visa, MasterCard, American Express, Discover, Carte Blanc, En Route, JCB and Diners Club payment processing, as well as ACH check payment processing
- Transaction monitoring, batch managing and settlements via Merchant Support
- Compatible with industry-wide applications and connected to the E-Complish ACH processing system
- Electronically connected to credit card processing systems throughout North America
- Single web-service API for both ACH and credit card, real-time ACH payments and credit authorizations
- Recurrent billing capability with order, transaction and batch search functions and automatic batch settlements
- Works with your existing systems and no software installation required

Easy to Install and Affordable too

- Stand-alone web system
- Customized processing capability
- E-Complish programming and integration guide

Security and Support Services

- 128-bit SSL encryption and fully compliant with PCI
- Address verification via AVS and CVV 1-2 card verifications
- Regular McAfee, TrustWave and First Data audits
- Free technical support
- Reliable, redundant system performance
